

FABRYKA
CMYKA

WE DO ALL KINDS OF PRINTING

Advertising print shop – clothing, packaging and promotional gifts

Fabryka CMYK'a (CMYK Factory) is much more than just printing!

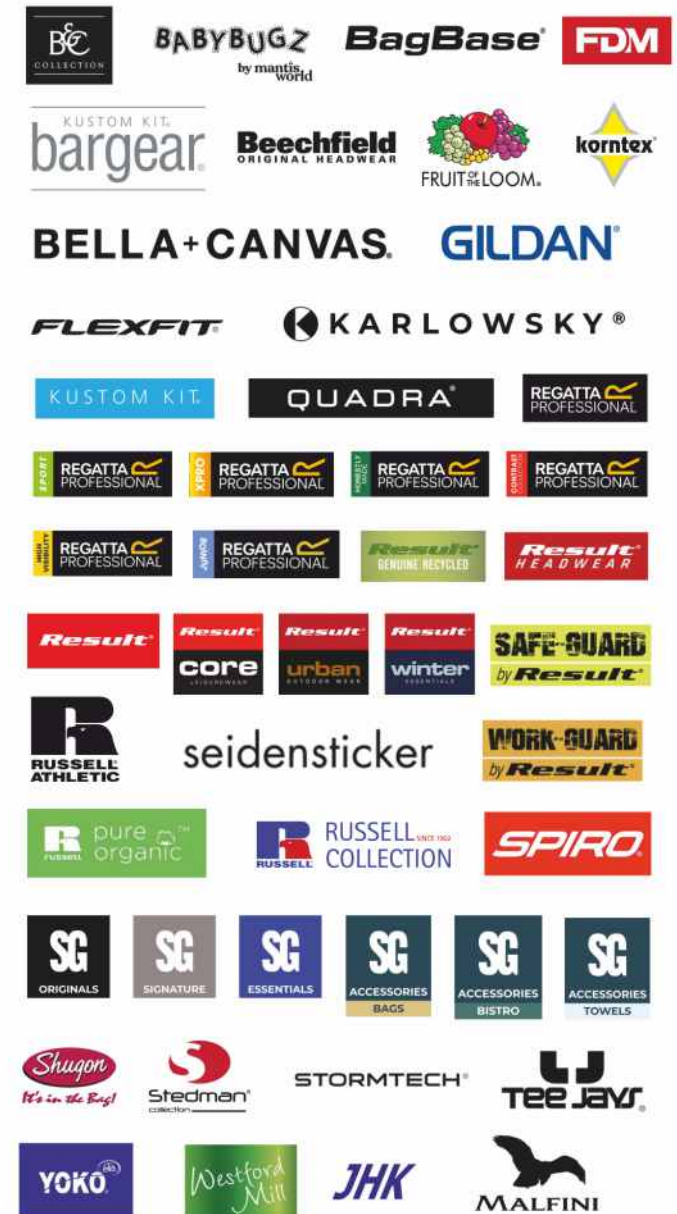

We handle all projects comprehensively and with an individual approach.

We strive to ensure that our company fully meets the needs and expectations of our customers. Our offer is not only based on screen printing, FLEX, pad printing or DTF - we also have a wide range of clothing: from classic T-shirts, sweatshirts, fleece, to caps and all kinds of gadgets. Fabryka CMYK'a is much more than just a print!

We handle all projects comprehensively and with an individual approach.

That's why you don't need an additional clothing supplier: you can get everything at the Fabryka CMYK'a. Our sales staff will be happy to advise you on the right textiles for your purposes! And in the company showroom, you can personally check the quality - both of our prints and of our clothing items.

We work with the biggest
brands on the market:

How do we print?

Contact us and we will help you to choose the most suitable technique.

01

DIRECT SCREEN PRINTING

A very stable and economical printing method. Most commonly used for labeling lightweight cotton fabrics

Page 4

02

HEAT TRANSFER

The method is used in clothes' labeling the most among other applications. The advantage of this method is the availability of printing multiple colours.

Page 6

03

DTF (DIRECT TO FILM)

A modern printing method that is perfect for low to medium order's quantity. It is characterised by high quality.

Page 9

04

REFLECTIVE PRINTS

A technique that involves cutting out the shapes from the reflective thermal transfer film and heat-embossing the shapes onto fabric.

Page 13

05

FLEX

A printing method that may be done even for 1 piece's order. The advantage is a low design cost. The price depends on the size of the printed item.

Page 15

06

SUBLIMATION

We choose this technique for overprints of things such as photos. It may be done even for 1 piece's order in bright colour and still keeps the best quality.

Page 18

07

TAMPOPRINT

A method is used for accurate prints, i.e. lines or elements in logos. Using this method, it is possible to print on the substrates such as rubber, glass and metal.

Page 21

08

DIGITAL UV PRINTING

The most modern printing method with high quality and durability. It is a technology used to print on the items such as pens, cases or pendrives.

Page 23

01

Direct screen printing

The advantage of screen printing is its versatility. We use this technique to print on the cotton and polyester T-shirts, polo shirts, sweatshirts, bags, sacks, waistcoats, trousers, blanks.

02

TRANSFER SCREEN PRINTING

Transfer screen printing is a method that involves printing using special transfer paper. The printed paper is sprinkled with a special powdered glue and using a heat-transfer press, the whole print is transferred onto the fabric and pressed in. In this case, the print is covery, does not get into the structure of the clothes, but only covers it with the "rubbery" smooth surface of the printed item.

03

DTF (Direct To Film)

DTF technology offers great opportunities to fastly produce multicolour thermal transfer prints in a very good quality and durability, that can be transferred by a thermo press to any fabric in any colour – even the stretch fabrics! This type of printing is perfect for stretch knitwear, e.g. sportswear, which requires a high-quality elastic prints that can be washed again and again.

04

REFLECTIVE PRINT

A technique involving cutting out the elements from a reflective thermal film with a plotter and a heat-pressing the shapes / letters / logo onto fabric (reflective waistcoats, scarves, bags, T-shirts, etc.).

05

FILM PRINTING

The advantages of this method are undoubtedly low preparation costs, which makes it possible, for example, to print a larger piece of clothes - but each piece with a different element (e.g. the name of a participant or the number, etc.), and in the case of printable flex, these are additionally printed in full colour, shaped as the client wishes.

06

Sublimation

It is pretty simple printing process, recommended for low quantity and multi-colour prints, such as photos. The technology is suitable for marking items starting from 1 piece, and in full colour with tonal transitions. Its only disadvantage is the mix of the colour with the material (except the white material for sublimation – on which any printed colour will be originally reproduced).

08

DIGITAL UV PRINTING

The advantage of this method is a high durability of the UV-cured paint. Unfortunately, this also has a disadvantage that once it is made, the UV print cannot, for example, be washed off and corrected by re-printing. This is why it is so important to analyse the production design carefully before approving it for printing.

Who are we?

We are a modern advertising printing house from Bydgoszcz. We love to realise difficult and unusual projects. We know the demanding advertising industry very well. Moreover, we take orders from Poland and all over Europe; we speak fluently in German and English. We are proud of our flexibility, due to which we are able to handle printing orders on orders made to us as well as those coming from our partners, i.e. Adler, L-Shop, Korntex etc. obsługujemy zarówno zlecenia nadruku na towarze powierzonym oraz dostępnym u naszych partnerów tj. Adler, L-Shop, Korntex etc.

What makes us different from others?

- The highest print quality. We use only original inks and materials.
- A multilingual customer service team helping to choose the best project solutions for you.
- The expertise and technological background required to realise the demanding orders.
- Taking care of the environment: we use the eco-friendly paints in our large-format shapers and environmentally friendly Easy-Way technology for screen printing.

Why us?

We believe in the rule that a company is made up by its' workers. That is why we invest most of our time and energy in our employees.

The printing technologies we use are very demanding and are prepared using the deep knowledge and experience of our employees. There are no "accidental people" in our team, there is a well-trained and well-coordinated team that prepares the orders of our customers with a huge commitment – each one is different, unique and often technologically complicated. Do you have a difficult printing job to do? Contact our sales department, we will do our best to ensure that the final result meets your expectations. As professionals, we will pay attention to many details which you might not pay attention to – and our knowledge base will save your costs and reach a needed result – a beautifully labelled promotional gift . We are looking forward to seeing you here!
